

10 Gigabit Certified IP Storage Program

As 10 Gigabit/second Ethernet (10GbE) storage rolls out, is your application or solution ready to leverage it?

Don't disappoint your customers - be ready and proven with the Intrinsa 10 Gigabit Certified IP Storage Program! Be sure your application is tuned to take maximum advantage of the power of 10GbE.

Installed in thousands of customer installations since 2003, IP network storage offers the benefits of storage area networks (SAN) at a fraction of the cost of older technologies. Now, with the introduction of 10GbE, IP network storage from Intrinsa exceeds the performance of other solutions with less complexity and lower customer cost.

By participating in the 10 Gigabit Certified IP Storage Program, you can be sure your product is ready to go with the latest IP SAN technology, long before most storage vendors are even offering 10GbE!

Intrinsa 10 Gigabit Certified IP Storage Program

- Deliver a solution that takes advantage of 10GbE.
- 10 Gigabit Certification tests for network, storage and application tuning requirements for ultimate performance.
- The Intrinsa StorAlliance Certification Lab provides I/O traces for collection and analysis, bottleneck identification, tuning requirements, best practices, and even code enhancement suggestions and retesting.

Contact Intrinsa today and ask about getting your application or product 10 Gigabit Certified! Call us at 408.678.8600 / 866.446.8726, email us at partners@intrinsa.com or visit us on the web at www.intrinsa.com. Don't be left behind!

**Don't risk your application
being left behind!**
